

United States Emergency Medical Corps

Executive Summary · October 5, 2026

The Mission

United States Emergency Medical Corps unites emergency physicians, emergency care professionals and institutions through shared resources and global collaboration. Its mission advances education, research, professional opportunity and equitable emergency care in service of humanity.

Institutional position

United States Emergency Medical Corps forms part of U.S. Medical Corps, the medical branch of United States Service Corps, within United States University. The public domain 911Physicians.com retains its connection to this mission.

Strategic programs

Employment and Advocacy. Professional opportunity, fair agreements and a stronger collective voice.

Education and Global Community. Learning and connection across disciplines, countries and generations.

Yellow Ribbon Hospital Partnership. A certification framework for workforce opportunity and shared emergency readiness.

Fetal and Maternal Emergency Medicine. Recognition, readiness, research and coordinated care for maternal and fetal emergencies.

Space Emergency Medicine. Research and preparation for emergencies in microgravity and remote environments.

Research and Learning. Evidence that informs action across emergency medicine.

Global participation

The scope includes emergency physicians, the wider emergency care workforce, students, residents, educators, researchers and institutions. Language access, local leadership and regional professional context guide international development.

From mission to institutional delivery

Implementation and accountability

Professional opportunity

Employment comparisons and a qualified legal advocacy model connect clinician needs with hospital staffing continuity, benefits, professional participation and transparent agreements.

Hospital certification

The Yellow Ribbon Hospital Partnership establishes a USSC certification framework with defined domains, independent assessment, corrective action, renewal and appeals. Recognition follows completed operating arrangements and qualified review.

Fetal and maternal emergency medicine

The program links recognition, equipment readiness, simulation, education and coordinated response. Wearables and the Quantum Medicine initiative sit within research and validation pathways, with clinical capability established by evidence.

Education and research

Medical school and residency learning, combat casualty and mass casualty training, professional exchange and space emergency medicine form a connected portfolio. PubMed research discovery and sourced statistics support the public information layer.

Current publication

The website provides dedicated program pages, institutional documents, sources and a research library. Initial program overviews are available in six languages; detailed professional resources remain in English. Protected community services, legal intake and certification awards require their respective operating arrangements.

Performance measures

Evaluate workforce stability, benefits access, training participation, readiness improvement and the completion of institutional commitments. Use a defined baseline and avoid claims of clinical or economic benefit before evaluation.
